EDUCATION

Nova University Lisbon

Degree in Computer Engineering (GPA: 14.75)

Lisboa, Portugal

Sep 2024 – Present

PROJECTS

Http Server | C

2026

- Designed and implemented an asynchronous HTTP/1.1 server using kqueue and non-blocking sockets, achieving 30,000 req/s on lightweight endpoints and 5,700 req/s under high concurrency.
- Maintained a minimal memory footprint of 1.5MB idle and 4.3MB under load, demonstrating high-efficiency resource management.
- Delivered low-latency performance with an average response time of 3.47ms during stress testing.
- Added IP-based rate limiting using a sharded hash table with token-bucket logic and a background cleanup thread.
- Implemented custom HTTP request parsing, routing, and response generation without external frameworks.

Malloc in assembly | Assembly

2026

- Developed a custom memory allocator in arm64 assembly, supporting alloc and free
- Implemented advanced memory management features including block splitting, coalescing, and dynamic OS memory requests.

EXPERIENCE

In-Nova Junior Enterprise

Lisboa, Portugal

Director of Projects Department

June 2026 – Present

- Overseeing all technical projects, ensuring agile methodology adherence and strategic alignment with client requirements.

Junior Consultant - Projects department

Apr 2025 – Present

- Responsible for the development, maintenance, and optimization of web and mobile platforms.
- Implemented RESTful APIs and integrated with relational databases (e.g., PostgreSQL or SQL Server).
- Used project management and collaboration tools such as Jira, Microsoft Teams, and Git.

NMBRS

Lisboa, Portugal

Summer Internship

July 2026 – Present

- Gaining hands-on experience in corporate software architecture and payroll management cloud systems.

NTT DATA

Lisboa, Portugal

Ambassador

Oct 2025 – Present

- Responsible for building and maintaining relationships between the company and university students.
- Collecting and analyzing feedback from students.

SKILLS

Programming Languages: Python, C, Java, C#, SQL

Tools: Git, GitHub, Jira, Postman

Infrastructure: Docker

Databases: SQL Server, PostgreSQL

Systems: Memory management, Concurrency & multithreading

Backend: Spring Boot, .NET, Rest APIs
